50X1-HUM

1. As of 22 April 1951, the radio station under construction two and one-half miles due southeast of Yana was nearing completion. A sketch of the layout of the station is shown in Appendix A, page 1.
2. A-H on Appendix A represent eight transmitting masts, located approximately 30 yards apart, with the whole group forming a distinct L pattern. As shown below, all these masts are similar to one another, being constructed of lattice steel supported by stays and surrounded by a mesh boom. Masts A, B, G, and H, however, have an estimated height of 110 feet, while the four center masts (C-F) are estimated to be 150 feet high. Masts A, B, and C are joined to each other at the top by two trusses. Below is a sketch of the transmitting aerial:

3. The aeriels sketched above had no other visible array characteristics such as curtains or feeders, when observed on 22 April 1951.
4. The area marked J on Appendix A contains a large number of 2-wire transmission lines carried on gaurdies approximately eight feet above the ground.
5. The dotted circle on Appendix A contains six masts, presumed to be receiving masts, placed close to one another but not joined above the ground by wires, each consisting of a single (?) steel post approximately 14 feet high held upright by stays. In addition, located at K within the circle, is one other mast, also approximately 14 feet high and not joined to the others, but with the six stays having a loop half way between the top of the mast and the ground. The significance of these six loops is not known. Below is a sketch of the unidentified (?) receiving aerial:

6. No special security precautions appear to be taken in the area.
